DISCLAIMER

Care has been taken to confirm the accuracy of the information present and to describe generally accepted practices. However, the authors, editors, and publisher are not responsible for errors or omissions or for any consequences from application of the information in this book and make no warranty, expressed or implied, with respect to the currency, completeness, or accuracy of the contents of the publication. Application of this information in a particular situation remains the professional responsibility of the practitioner; the clinical treatments described and recommended may not be considered absolute and universal recommendations.

The authors, editors, and publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accordance with the current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new or infrequently employed drug.

Some drugs and medical devices presented in this publication have Food and Drug Administration (FDA) clearance for limited use in restricted research settings. It is the responsibility of the health care provider to ascertain the FDA status of each drug or device planned for use in their clinical practice.

Subject Index 1-0
“More than a textbook—it’s a learning system”. That has been our challenging goal since the 1st Edition of "Head and Neck Surgery-Otolaryngology" went to the printer twenty years ago. Once again, we began the planning of this 5th Edition with the recruiting of experienced and expert authors capable of providing our readers with the most current and useful evidence-based information available for residents and practicing physicians intent on mastering the practice of our specialty.

Comprehensive, concise, and practical content that is presented in the format designed to increase the understanding, retention and application of knowledge is the end result of the efforts of our outstanding team of Section Editors led by Jonas Johnson. Useful illustrations, helpful summary tables, and supplemental video segments enhance the effort of the learner to retain and apply the information contained in these volumes. A new and valuable Study Guide is available to assist with benchmarks of the progress that the reader has made.

And now, with sincere thanks to the authors and editors who have made this learning system possible, we have arrived once again at the point where vision becomes reality.

Many months of hard work have been transformed into a product with the potential to move clinical care to a higher level, and that is always the foundation of our striving.

We welcome our new readers and we applaud your decision to join us in this quest for greater understanding for ourselves and improved care for our patients.
